PHILADELPHIA, February 26 1881

Dr. Englemann
St. Louis Mo.

Dear Sir: On the writers way home from Hot Springs Ark. two weeks ago. He met H. B. O'Reilly Esq. who had in his possession a large petrified bone, said to have been found near Dallas Texas, I have been very curious to know more about its history, and as Mr. O'Reilly said he intended to present it to you for examination would esteem it a great favor to receive a few lines from you on the subject.

We consume several thousand tons of Mineral Phosphate per annum in our Works in the east and are anxious to use them in the west (Chicago & St Louis &c) and wish to procure ~~[illegible]~~ it in the great west instead of sending as at present from South Carolina and from Canada

should you be able to give ~~me~~
any information enabling us to
find this Phosphatic deposit
we will gladly employ a
Competent person to aid in
its discovery. From Newspapers
reports it would seem that
the Manvaise terres of Kansas may
be the location we are looking
for - The large amount of organ
ic matter produced at the
various Packing-houses of the west
gives us a great excess of ammo-
nia, and the want of the Phosphate
is seriously felt

With great respect

Yours Very Truly

E. P. Baugh
